

Greenbox helps SAP users maximize their document management efficiency

For businesses running SAP as their ERP solution, SAP S/4HANA and its predecessor SAP R/3 are predominant choices. The two business solutions provide comprehensive ERP and CRM features. From data warehousing to AI, SAP S/4HANA and R/3 are designed to adopt new business models and solve complex challenges effectively.

Challenges

Despite how flexible SAP is, the software has several limitations for effective document management, restricting its expertise. SAP databases have the tendency to slow down when there is a lot of data being stored in them and more information gets uploaded on a regular basis over time. This often leads to slower response times and that's when it starts affecting users' experience. Also, this puts a lot of pressure on storage and infrastructure costs because the system itself doesn't support storing large amounts of data directly on its database memory. SAP is a complex software product that requires expertise. As extensive training is required during implementation, it is not user-friendly or intuitive for new users. Costs of SAP licensing are high. Organisations often need to buy these licences for external parties or business partners. For example, a view-only-access licence for auditors with limited access. The purchase of several licences also adds to higher costs. SAP DMS is an add-on for existing SAP products and is therefore only compatible with them. SAP does not provide email archival. SAP DMS currently does not support a mobile application for document management. While some mid and large-scale companies can deploy SAP into their business operations, it is not a feasible option for most. It is especially nonviable for small-scale enterprises due to its implementation complexity, required staff training, and high costs. These obstacles limit SAP utilisation. Organisations must also purchase SAP DMS add-ons individually for better management of documents. Hence, mid and large-scale organisations need to seek out DMS options outside the SAP ecosystem.

Solution

Greenbox is the ideal alternative for SMBs and large enterprises that require more than a simple storage solution. It offers high functionality, scalability, and performance with no additional costs - because all documents are stored in the file system. It is easy to set up with minimal specialized help. The intuitive UI lets users navigate the DMS easily and on-demand training and support are just a click away. The Greenbox team handles all requests directly. Implementation, support, and customization services are tailored to suit the budgets of all enterprises. Greenbox archives existing employee emails by enabling businesses to search existing messages with ease, in turn making it a lot easier to archive employee old emails. By using OCR tagging with excellent search functionality, business owners can easily find archived data in real-time when they need it most! Greenbox Licensing is more comprehensive and cost-effective for any on-premise, cloud, or hybrid deployment, as well as offers, pay-as-you-go subscriptions with custom storage plans. And as any app user can attest to, having document retrieval and approval capabilities on various mobile devices at their fingertips makes Greenbox an easy choice for your next business application needs.

Why choose Greenbox DMS?

- ▶ It is an intuitive and user-friendly system, having all the management and security features that meet an organisation's needs - be it small, mid, or large-scale organizations.
- ▶ It provides flexible and customised support before and after implementation. Businesses can reach Greenbox customer support directly via email or call anytime.
- ▶ The software fits the budget of all organisations and helps save money on licensing, implementation, training, support, customisation.
- ▶ It supports seamless third-party integrations and simplifies interactions among various business applications to meet all industry document management requirements.

Here are some examples of business scenarios where documents are heavily involved and managed swiftly by Greenbox without having to compromise on performance.

HR document management

Managing employee documents like pay packages, bonds, and agreements, and other confidential documents is a crucial responsibility of the HR department. Greenbox offers a secure digital repository where HR can impose stringent permissions and track user activity through real-time reports and audit trails.

Accounts payable document management

The Greenbox integrated workflow can efficiently help organisations keep track of orders and services completed and share and collaborate the process of invoice generation and management.

Contract management

Mid-scale and large-scale organisations have many negotiated, re-negotiated, and updated contracts. Greenbox provides three powerful search options--Open text, OCR, and metadata that ensure contract management is simple and efficient.

Document review and approval process

Organisations with multi-tier document review processes can benefit from Greenbox. The DMS has accurate version control and an authority system that is useful in the revision and approval process.

Online document management

Storing documents on in-house servers can be difficult due to space constraints. Greenbox provides scalable cloud storage that allows easy capture and management of electronic documents, Microsoft Office files, scanned images, or other multimedia files.

Discus Business Solutions: Your partner

Greenbox offers an excellent alternative to SAP S/4HANA and SAP R/3 for document management. Organisations can optimise operation costs by removing unnecessary licences, higher maintenance and infrastructure cost and the complexity of using SAP systems.

Greenbox has proven to be a secure, flexible, and collaborative DMS that provides efficient and contemporary document management solutions. Discus Business Solutions has been instrumental in helping organisations achieve productive document management on Greenbox. With expertise in AWS, SAP, and product implementations, Discus Business Solutions also offers several end-to-end IT solutions.

Testimonials

DBS has been our SAP global infrastructure and AWS support partner for more than 5 years. One of our most seamless SAP project has been migration to cloud which was planned and managed by the DBS team. Their support team is proactive and ensures our SAP runs flawlessly and whenever support is required they are available

- Kunal Shah
Executive Director, AIA Engineering Limited

Discus Business Solutions successfully helped us migrate our on-premises SAP databases to AWS. After careful planning, the migration was carried out without any disturbance to our business processes. The day-to-day management of SAP is also in good hands at Discus Business Solutions.

- de Jong, Jeroen
IT/QA Head

Discus Business Solutions manages our IT landscape which includes SAP, infrastructure, software and user support. Pharma being a very regulated industry we wanted a partner who can understand our business, compliance & end user requirements. They have been our partner since 2 years, they have been managing our day to day IT operations. With their IT support we are assured that if there is any issues than it will be resolved in a timely manner with proper RCA keeping long term approach in mind
